Cable type

Water Bag type

CABLE TYPE AIRDOME

The Cable Type Airdome has a plastic coated steel cable welded into a reinforced PVC sleeve that runs continuously around the perimeter of the base of the dome. This is attached at intervals to the pool surround by eyebolt fixing anchors and quick release carbine hooks.

This well proven system requires a good 0.15m thick foundation such as a concrete surround or paving set on concrete to provide adequate strength for the fixing anchors – all fixings are supplied. A Cable Type Airdome can be easily removed for the summer months; all fixings can be completely removed to leave the surround area clear.

Cable Type with quick release fixings. Maximum size: 10m x 23m (33' x 75'). Approximately 230m².

WATER BAG AIRDOME

The Water Bag model has 6 water tubes that are held in a reinforced PVC sleeve that runs continuously around the perimeter of the structure. This provides enough weight to hold the Airdome in position, seal the base of the dome with the surround, and is suitable for sheltered pool areas only. Water Bag Airdomes require no drilling or fixing of any kind, making them very quick and easy to install. Filling the waterbags is a simple operation, using a garden hose to fill each one in turn from the mains water supply. The maximum recommended size for a Water Bag Airdome is 8m x 13m (26' x 42'), approximately 100sq/m. Requires a flat stable surface.

CHOICE OF COLOURS

Cable and Water Bag Airdomes are available in blue tint, bronze or clear material with a reinforced roof. All Airdome materials are made from tough, UV stabilised PVC. Countries with warm climates require all reinforced material.

TAILOR MADE TO SUIT

Cable and Water Bag Airdomes can be tailored to suit individual needs. Pools that have irregular shaped surround areas or need one end rounded off rather than the standard rectangular shape can be catered for.

SAFE AND SECURE

If you have children or pets, an unprotected swimming pool can be a constant worry. An Airdome provides a physical barrier around your pool that is difficult to penetrate. It will also keep out the vast majority of leaves and debris, leaving your pool clean and ready to use with the minimum of fuss.

QUIET FAN UNIT

The heart of an Airdome is the fan unit. Housed in a fibreglass box the fan is extremely quiet and cheap to run, costing no more than a 100 watt light bulb

ZIPPER DOORS

Each Airdome has two zipper doors for access, positioned to the customer's requirements, one standard and wide opening "L" type.

PRESSURE CONTROL SYSTEM

The system is fully controllable to adjust the pressure within the dome.

If you should require further technical information please do not hesitate to contact us.

FEATURES

- Provides a safe and economical way of covering your pool while reducing heating and chemical costs
- Keeps animals and children at a safe distance from the pool
- Protects from the elements and maximises heat from the sun's rays
- Can be quickly installed or removed from pool area
- 3 year pro-rata warranty

Air dome pool covers are a superb option and a great addition to any outside pool, giving you longer swimming hours for you and your family, whilst helping to look after the pool against the elements.
